

PATENTED RESIDUAL ANTIMICROBIAL SOLUTIONS

We know how critical it is to maintain a clean, safe, healthy environment. ServiceMaster Clean has a scientific and thorough approach using the most effective products and protocols to break the chain of infection and protect your customers and facilities. After traditional cleaning and appropriate disinfection, our highest level of disinfection service uses Goldshield antimicrobial and protectants to mitigate post-disinfection risk and provide an extra layer of protection even after your consumers re-enter your facility.

GOLDSHIELD 5

RESIDUAL ANTIMICROBIAL PROTECTION FOR UP TO 90 DAYS

RESIDUAL ANTIMICROBIAL PROTECTION FOR UP TO 90 DAYS

Next-Generation of Microbial Control

- Unique, patented molecular assembly
- World's first and only water-stabilized antimicrobial formulation with a surface penetrating ingredient which provides for long-term residual protection
- Inhibits the growth of bacteria, fungi, mold, & mildew which can cause odor, staining, & discoloration for up to 90 days with just 1 application

Features & Benefits

- Water-based, contains no harsh solvents
- Bleach-free & alcohol-free
- Will not leach or wash off once applied
- Non-flammable
- EPA Approved- Reg. 85556-2
- Made in the U.S.A

GOLDSHIELD 24

ALCOHOL-FREE HAND SANITIZER & PROTECTANT

EXTENDED PROTECTION COMPARED TO ALCOHOL-BASED HAND SANITIZERS

Next-Generation of Infection Control

- Unique, patented molecular assembly
- World's first and only water-stabilized, alcohol-free hand sanitizer that provides for long-term residual protection
- Will not leach into the blood stream as it bonds to the carbohydrates of the skin, whereas alcohol-based hand sanitizers can leach into the blood stream and are toxic

Features & Benefits

- Kills up to 99.99% of germs and other bacteria
- Alcohol-free, safe for kids
- Water-based, won't dry, crack, or irritate skin
- Non-flammable
- FDA registered
- Made in the U.S.A

ServiceMaster Clean disinfection protocols use EPA-registered disinfectants and exceed CDC-guidelines. GoldShield is an additional layer of protection and infection risk mitigation, applied after completing the disinfection protocol. GoldShield immobilizes pathogens, restricting their spread and any risk of transmission.
